Acentric chromatid, 78
Acentric fragment, 78
Adaptability, hybrids, 99
Adaptedness, upper attainable level, 219
Adaptive evolutionary phenomenon, 173
Additive gene effects, 168
Additive genetic variance, 511
Additivity of heterotic gene effects, 483
Adenine relation to histidine synthesis, 278
Adenine requirer, 278
Agglutination titer, 280
Albinism, 237
Alcaptonuria, 237
Alcohol dehydrogenase, 110
Alfalfa cross- and self-fertilization, 81
Alleles, 481
divergent, 173, 458
fortuitous, 322
interaction between, 229–30, 234
of intermediate productivity, 294
less favorable, role of, 323–24
pseudo and multiple, 254
relic, 322
Allelic genes, 236, 240
Allelism, multiple, 500
Aluminum in hybrids, 106
American Corn Belt dents, heterosis of, 138–46
Anaphase, 75
Anaphase I of cell illustrated, 67
Anaphase I dyads, 73
Anaphase II, 76, 77, 79
Anaphase II of cell illustrated, 67
Anaphase II monads, 73
Angiosperm endosperm, 83
Angiosperm ovule, 83
Angiosperms
female gametophyte in, 83
fertilization, 83
mature ovules, 83
secondary fertilization, 84
seed, 82–85
seed coat, 83
seed development, 81
Animal inbreeding, 5–7
Anthocyanin, 237–38
Antibiotic substances, 117
Antigenic characters, 239, 240
Antigenic complexes, 253
Antigenic relationships, 244
Antigenic specificity, alteration of, 278–80
Antigenic variants induced by radiation, 279
Antigens, 240, 242, 268
in cattle, 252–54
of pneumococci, 254
Artificial hybrid, 424
Artificial selection, 219–20
Asexual reproduction, 47
Autogenic growth inhibitors, 117
Autonomous apomicts, 89
Autonomous organelles of the yeast cell, 261–62
Auxins, 112
Auxotrophic mutants
biochemical studies, 275–78
Edwards technique of growing, 279
frequencies in S. typhimurium, 271
kinds in S. typhimurium, 272
methods of inducing, 269
from radiated lines, 269–70
of S. typhimurium, 281
Auxotrophic organisms, 269
Auxotrophs
determination of particular nutrient required, 270
utilization of sulphur compounds, 276
Average dominance, estimate of, 497–99
Average dominance of genes, estimation of, 494–516
Average hybrid, 291
Backcrosses, 423
Backcrossing, 231, 379, 421
in maize, 235
Bacterial genetics, 267
Bacterial mutation, 267
Balanced defective, 324
Balanced euheterosis, 221–22
Balanced lethal genes
in Capsella grandiflora, 46
in Oenotheras, 46
Balanced polymorphism, 221
Barren stalks, 16
Biochemical basis for sulfonamide-requiring character, 207–10
Biochemical defects as gene markers, 256
Biochemical deficiencies, 257
Biochemical genetics, 256
Biochemical models of heterosis in Neurospora, 199–217
Biochemical reactions essential to growth in Neurospora, 208–9
Biochemical studies of auxotrophic mutants, 275–78
Biotypes, 20, 24
variation in, 26
Bottleneck genes, 325, 327, 424, 428
Bottleneck locus, 325
Bottlenecks
environmental components of, 329
genetic-environmental, 325
physiological, 325, 326
"Breaking of the types," 15
Breeding, practical necessities, 140
Breeding plans
reciprocal selection between two crosses, 457
selection in crossbred to homozygous tester, 457
Breeding plot efficiency, 146
Breeding procedures, improvement limits, 416
Breeding records
of human beings, 2
of primitive deities, 2
Breeding stations in Mexico, 426
Breeding systems, 414
Budding, 262–64
Carboxylase, 110
Catalase activity, 108
Cattle cells, 252
Causative genes
action of, 255
direct effect of, 239
Cell membrane and cell wall, 262
Cellular antigens in humans, 240–43
Cellular characters within a species, 251–55
Centrochromatin, 262
Centromere region, 72, 74
Centrosome, 261
Character complexes, importance in maize breeding, 131

Prototrophic organisms, 269
Pseudo-alleles, 254, 295
Pseudoheterosis, 223
Pseudo-overdominance effect, 325, 458, 501
Pure lines and their hybrids, relationship between, 28
Pure line method in corn breeding, 28
Pure line method of corn production, 44
Pure strains, 24
Pyridoxal phosphate, 110
Pyrimidineless mutant plus suppressor allows growth, 217
Pyruvate carboxylase, 110
Quadruple crosses, 44
Quantitative inheritance, role of limiting factors, 324–27
Random mating, 432
Recessive characters, deleterious, 100, 323
Recessive and dominant lethals, 160, 480
Recessive genes, 225–26
Recessiveness and deleterious effect, correlation between, 284
Recessives, 11
Reciprocal cross, 28
Reciprocal effects, 487
Reciprocal recurrent selection, 415–17
- with inbreeding, 457
Reciprocal selection, 351
Reciprocal testing, method of, 443
Recombination, 267
Recombination tests in Salmonella, 274–75
Reconstructing a hybrid, 449
Recurrent selection, 351, 411–12, 451–73
- effectiveness of, 467–70
- for general combinability, 470
- among homozygotes, 470
- meaning, 452
- as a method for modifying chemical composition, 411
- as a method for modifying combining ability, 411
- in modifying combining ability, 415
- for specific combinability, 454–57, 470–73
Recurrent series, 412
Recurrent selection and early testing, 400–417
Recurrent selection and inbreeding in modifying oil percentage in corn, 411–12
Recurrent selection and overdominance, 451–73
Red blood cells, 239
Regression, partial, offspring on parents, 463
Regression trends, 461
Regressions, genetic interpretation, 462–65
Relic genes, 424
Reproduction, asexual, 47
Repulsion linkages, 502
Reversed heterosis, 225
Residual heterozygosity in inbreds, 31
Rh substance, 242
Root cultures, 109–10
Root growth pattern, relation to heterosis, 106
Rotational crossbreeding, 374–77
- and heterosis, 371–77
Rust, 424
Saccharomyces
- chromosome maps of, 258
- genetics and cytology of, 256–66

Salmonella
- advantages for genetic studies, 268
- recombination tests, 274–75

S. typhimurium, genetic implications of mutations in, 267–81

Scales of measurement as related to dominance, 313

Scaling tests, 162, 164, 174

Second-cycle hybrids, 453–54

Secondary fertilization, 82, 90, 93
  - in angiosperms, 84
  - in flowering plants, 95

Seed development, 104
  - in angiosperms and gymnosperms, 81
  - early stages of, 96
  - without fertilization, 89–93
  - grade and embryo growth potentialities, 93–97
  - inbreeding and crossbreeding in, 81–97

Seed in gymnosperms and angiosperms, 82–85

Seed and embryo development, 103–5

Seed size as related to embryo size and heterosis, 103–4

Seedling growth, 105
  - and heterosis, 105

Seeds, number in maize X teosinte, 196

Segregating factors, number of, 174

Segregation, 24

Segregation for yield factors, 382

Segregations, irregular, 258

Selecting for maximum heterosis, effectiveness of methods, 339–51

Selection, 14, 161, 341, 406, 414
  - for additive effects in normal distribution, 355
  - for additive genetic values in individuals, 359–61
  - for cross performance, 349
  - against a dominant deleterious mutant, 220
  - effectiveness of, 333, 335
  - effectiveness of within inbred lines, 332–34
  - as an estimation problem, 354–58
  - when form of distribution is unspecified, 355–58
  - for general and specific combining ability, 353–54
  - for general combining ability, maternal ability, and specific ability in line crosses, 364–68
  - for general combining ability in topcross tests, 361–64
  - homozygous tester versus reciprocal, 343–47

index method, 355, 356
  - on individual performance, 349
  - ineffectiveness of, 335, 350
  - by maximum likelihood estimates, 358–59
  - natural and artificial, 219–20
  - natural, for heterozygosity, 180–81
  - performance levels attainable by, 341
  - reciprocal or homozygous tester method, 349
  - results of, 170
  - for specific combinatorial, 454
  - on test-cross, 349
  - with unknown variances and covariances, 358–59
  - use of all records in, 359

Selection experiments, 156
  - controlled, 334–35
  - with swine, 350

Selection for general and specific combining ability, need for additional research, 369–70

Selection within and among inbred progenies, 401–2

Selection of inbreds on performance, 140

Selection index, 354
  - modified, 356

Selection for maximum heterosis, methods of, 350–51

Selection, reciprocal, 351

Selection, recurrent, 351
  - and early testing, 400–417
  - for maximum heterosis, 341–42
  - and overdominance, 451–73

Selective advantage of a heterozygote, 467

Selective advantage of polygenic characters, 158

Self-fertilization, 16, 17, 45, 48, 139
  - in alfalfa, 81
  - versus cross-fertilization, 20
  - in maize, 49

Self-fertilized populations, 322

Self-pollinated plants, 161

Self-pollinated and cross-pollinated plants, comparison of methods, 55

Selfed lines, first generation, 448

Selfing, 12, 16, 23, 173–74, 379, 382, 390, 402, 406, 409

Selfing and crossing corn, results, 36

Selfing and loss of vigor, 13

Selfing series, 412–15

Selfing and sibcrossing, comparison between, 41

Semi-inbred lines in synthetics and hybrids, utilization of, 431

Senility, 14

Sequential testing, 361

Shank, importance in modern corn breeding, 146–47
Sib crosses, advantage over self-fertilization, 29
Sicklemia, 295
Single cross
distribution, 145
estimation of the value of, 367
Single cross yields versus double cross, 58
Single gene heterosis, 155, 282
Single locus heterosis, 102
Somatic antigens, 268
Southern Dents, 127, 129, 131
characteristics of, 136
distribution of chromosome knobs, 130
ear of, 133
historical record, 128
kernel of, 133
and Northern Flints, crosses between, 137
and Northern Flints, differences between, 136
seeds of, 134
shanks of, 134
typical ears of, 134
typical plants, tassels, and staminate
spikelets of, 135
Species specific, 254
Specific combinability, 452
heritability of, 451
recurrent selection for, 454–57, 470–73
working definition, 454
Specific combining ability, 352–53, 487–91
game selection for, 378–88
Specific and general combinability, relative
importance, 451
Specific and general combining ability, 352–70
Specificity of gene effects, 236–55
Spindle, 74
Spores, mating types, 257
Sporophyte, 389
Standard inbreds, 233
conversion, 233
Statistics, role in genetical research, 494
Sugar cane
cross-fertilization in, 320
male sterility in, 320
propagated asexually, 320
reaction toward inbreeding and outcrossing, 320
self-pollination in, 320
Sulfonamide-requiring character
biochemical basis for, 207–10
heterocaryotic suppression of, 203–7
Sulfonamide-requiring strain, 212, 215
Sulfonamides, 111
Sulfur compounds, utilization by various
auxotrophs, 276
Sulfur containing compounds, reactions, 277
Super-dominance, 282
Superior mutant, 323
Supernumerary chromosomal fibers, 72
unorthodox formation, 72
Suppressor heterocaryosis, 212–15
Suppressor genes and sulfonamide utilization, 213
Suppressor mutant strains, growth curves, 214
Suppressor mutants, 203
Swine and corn inbreeding
degree of heterozygosity, 338
effectiveness of continued phenotypic
selection, 338
Swine, heterozygote advantage for single
loci and chromosome segments, 340–41
Swine inbreeding experiments, results, 331–32
Synapsis, 69, 115
Synthetic varieties, 432
formation, 433
Synthetics, 448
estimating number of lines to use, 432
propagated through open-pollination, 426
Teosinte (See also Maize)
ecology, 183
variation, 184–85
Teosinte germplasm, 419
Terminal chiasmata, 68
Test crosses, 408
Tester lines, partially inbred, use of, 347–48
Tetrad analysis, 258
Thiamin pyrophosphate, 110
Thiamine, 118
“Three-way” crosses, 40, 42
Tobacco, crosses between varieties and
species, 49
Tomato hybrids
number of fruit that ripens, 309
weight per fruit, 309
yield of ripe fruit, 309
Tomatoes, main and component characters, 305–10
Tomato roots, 116
Topcross combining ability, 406
Transgressive characteristics, 172
Transgressive inbred, 161
Translocation point, 68
Triphosphopyridine nucleotide, 110
Triploids, 389
Tripsacum, 419
Tripsacum hypothesis, 138
Trivalent associations, 69
Univalents, 69
INDEX

Ustilago maydis, 24

Variability, 49
Variance components, estimating, 368
Variance components, genetic interpretations, 503
Variances of general, maternal, and specific effects, estimation of, 368–69
Variety crossing, 16
Variety testing, 426
Vascular organization, 108
Vegetative propagation, 12, 13
Viability, 335
Vigor
hypotheses for difference in, 300–302
loss of and selfing, 13
reestablished by outcrossing, 7
Vigor in original plant as measure of number of favorable yield genes, 428
Vigorous hybrid and weak inbred, difference between, 327
Virulence, 279

Water requirements of hybrids, 106
Waxy gene, 239
Weak inbred and vigorous hybrid, difference between, 327

White dent corn, 32
frequency curve of grain rows, 21
White dent maize, 29
average grain-row numbers, 38
average values in the families of, 35
yields per acre, 38
Xenia, 8, 9
history of, 10
in maize, 10
X-ray dosage and mutation frequency, 271–74

Yeast genetics, 257
Yeast, advantages for biochemical genetics, 257
Yield loss from one generation to the next, 42
Yield of seed, prediction of, 302
Yielding ability, correlations indicative of, 54

Zea (See Maize)
Zea mays
double crosses, 378
gamete selection for specific combining ability, 378–88
single cross performance data, 378
test crosses, 379
Zygote, 371
