

SELECTED READINGS

There are several bibliographies that may be used to supplement the very restricted number of references listed below. In order to avoid duplication, only the references cited in the text or bearing directly on problems of methodology or theory as related to the narrow field of the economics of soil conservation are included. For those who wish to obtain a background of soil science I suggest Dr. Charles E. Kellogg's book *The Soils That Support Us* (The Macmillan Co., New York, 1941, 370 pp.). For details regarding the physical aspects of erosion and erosion control, there is Dr. Hugh Hammond Bennett's encyclopedic work *Soil Conservation* (McGraw-Hill Co., New York, 1939, 993 pp.).
