

RECENT PUBLICATIONS

The recent publications noted below do not deal directly with non-marine Mollusca of the Americas yet they may be of interest to those whose interests lie in that field. They were thought to be of sufficient importance to note in these pages, even if only to show that work on non-marine Mollusca and related fields continues in other areas. Some of them may prove to be useful auxiliary references; others may suggest methods of study which have not been used in North America; still others may provide interesting sidelights on ecology and paleoecology.
